PROFESSIONAL SUMMARY

A results-driven **Frontend Engineer** with 3+ years of progressive experience specializing in building scalable, high-performance web applications using **React**, [Next.js](#), **Tanstack Start**, **Vue**, and **TypeScript**. Strong focus on modern component architecture, state management, and performance optimization techniques (e.g., lazy loading, asset optimization). Proven ability to translate complex business requirements into clean, maintainable, and highly accessible user interfaces while thriving in cross-functional, globally distributed Agile teams. Seeking a **Frontend Engineering role** where technical excellence and user experience are paramount.

CORE TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks/Libraries: React, Next.js, Vue.js, [Nuxt.js](#), Tanstack Start

State & Data Management: Redux Toolkit, Zustand, TanStack Query

Styling, UI & Testing: Tailwind CSS, ShadCN, Bootstrap, Jest

Tools & Platforms: Gitlab, Github, Websocket, Firebase, MongoDB, WordPress, Hostinger, Azure

Best Practices: Responsive Design, REST API Integration, Performance Optimization, Agile/Scrum

Soft Skills: Problem Solving, Collaboration and Teamwork

PROFESSIONAL EXPERIENCE

Frontend Developer

Anora — Lagos, Nigeria | August 2025 – Present

- Build and maintain production-grade frontend applications with React, Next.js, and TypeScript.
- Design reusable, accessible UI components aligned with design systems.
- Collaborated with designers, PMs, and backend engineers to deliver features end-to-end.
- Optimize performance via lazy loading, code splitting, and asset optimization, improving load times.
- Debug and resolve UI and integration issues to enhance product stability.

Frontend Developer

Ojallu — Lagos, Nigeria | November 2024 – November 2025

- Designed responsive, user-friendly interfaces with HTML, CSS, and JavaScript.
- Developed custom UI components and improved existing interfaces for better UX.
- Integrated APIs and collaborated with cross-functional teams to deploy new features.
- Applied performance optimization techniques to reduce page load time.

Frontend Developer

Padding Technology — Lagos, Nigeria | January 2024 – May 2024

- Built a workspace management application, improving productivity by 25% through streamlined user authentication and invoicing using Next.js, TypeScript, Tanstack Query and Redux Toolkit.
- Built a dynamic website using Nuxt.js, optimizing SEO and enhancing web traffic by 30%.
- Ensured mobile compatibility and cross-browser consistency through responsive design principles.
- Developed a planning application enabling efficient event scheduling and management, leveraging Next.js and Redux Toolkit.

Frontend Engineering Intern

HNGX (Zuri), Lagos (June 2023 – September 2023)

- Developed responsive landing pages with React and Tailwind CSS, enhancing client engagement.
- Created a responsive mini movie app using TMDB API, React and TypeScript.
- Built a photo gallery application featuring a drag and drop functionality and firebase based user authentication.

SELECTED CASE STUDIES

Deep-Linked Modals & Session-Aware UI — *What's Hot in Lagos*

Project: Events and venues in Lagos discovery platform

Context / Problem:

- Non-shareable forms implemented as modal components prevented direct-link access.
- Disruptive homepage overlay prompted repeated interactions, frustrating users.

Role: Sole Frontend Developer responsible for routing, UI state management, modal orchestration, and session-based UX.

Technical Approach:

- **Deep-Linking:** Enabled URL-driven modal states via query parameters, supporting direct linking to submission flows.
- **Session-Aware Overlay:** Stored interaction state in session storage to suppress repetitive overlays while maintaining first-time user prompts.

Outcome / Impact:

- Enabled shareable links for event submissions, improving content onboarding.
- Eliminated repetitive overlay interruptions, improving overall UX and reducing user friction.

Admin Dashboard Access Control — *Shakarra Platform*

Project: Admin Dashboard of an Ecommerce website

Context / Problem:

- Multiple administrators could view/modify any user's orders or disputes, creating accountability and security risks.

Role: Frontend Engineer responsible for implementing role-based access control and enforcing UI-level data visibility.

Technical Approach:

- Implemented role-based checks using user metadata at authentication.
- Conditioned routes, tables, and actions based on roles (super-admin vs. standard admin).
- Filtered client-side data to restrict non-super-admins to assigned users only.

Outcome / Impact:

- Prevented unauthorized access to client data.
- Increased accountability and traceability for admin actions.

EDUCATION

Associate Degree — Software Engineering

ALX Africa (Holberton School), Nairobi, Kenya | 2022 – 2023

MSc — Environmental Chemistry

University of Port Harcourt, Nigeria | 2018 – 2021

BSc — Pure & Industrial Chemistry

Nnamdi Azikiwe University, Awka, Nigeria | 2010 – 2015

CERTIFICATIONS

- **Principles of UI/UX design** - (Meta, July 2024)
- **Advanced React** - (Meta, April 2024)
